

The safespace™ device creates a “coherent polarizing field effect” in the cell phone’s electromagnetic fields (EMFs). Through this influence the damaging effects of the EMFs are neutralized without having to eliminate the field itself.

Interference Patterns

contained in the safespace™ interfere with the negative EMF emissions from wireless devices and as a result offset the disturbing frequency patterns emitted from wireless devices to create an end result of a neutral frequency signal.

Resonant patterns contained in the safespace™ resonate with the frequency patterns associated with a normally healthy human body. This resonance phenomena strengthens and supports the vibratory patterns of the body which are always naturally attempting to adapt to and recover from disturbing, unnatural EMF emissions like those emitted from man-made electrical and wireless devices including cell phones.
